

AMAIA AMEZAGA

AI EVALUATOR · HUMAN-AI INTERACTION RESEARCHER · SOCIOTECHNICAL AI SAFETY

Mexico (Remote) | amaia.amez@gmail.com | [linkedin.com/in/amaia-amezaga](https://www.linkedin.com/in/amaia-amezaga) | github.com/sattvalabs
Spanish (native) · English (fluent) · Norwegian (fluent) · French (advanced) · Basque (intermediate)

PROFILE

Independent researcher and multilingual AI evaluator with a background in Human-Computer Interaction. My work focuses on sociotechnical AI safety, particularly how AI behaviour, representation, and repeated interaction affect human judgment, reliance, autonomy, and oversight. Through Sattva Labs, I investigate multidimensional and temporally resilient approaches to AI evaluation that can remain meaningful as models, architectures, capabilities, and forms of agency rapidly change. I combine behavioural evaluation, conceptual research, design, and public communication to build bridges between technical research, human experience, and broader understanding of AI risk.

RELEVANT EXPERIENCE

Human-in-the-Loop AI Evaluator | Mindy Support

2025-2026 · Remote

Evaluate LLM outputs for truthfulness, harmfulness, reasoning quality, alignment, and instruction following across large datasets.
Apply detailed and evolving guidelines consistently; identify edge cases, recurring failure patterns, and ambiguous behaviours.
Produce structured rationales and feedback that make model-quality and safety judgments clear and actionable.

2023-Present · Remote

Founder & Independent Researcher | Sattva Labs

Research sociotechnical AI risks arising from interactions between model behaviour, system representation, human interpretation, and patterns of reliance.
Investigate overreliance, misleading capability signals, anthropomorphism, persuasion, sycophancy, psychological and epistemic risks, and the gradual weakening of human autonomy and oversight.
Develop the Cognitive Topology Project, a multidimensional, dynamic, and non-anthropocentric approach to making AI capabilities, limitations, behavioural tendencies, and interaction-related blind spots more legible.
Explore evaluation and representational methods designed to remain relevant across rapid changes in models, architectures, capabilities, contexts, and forms of agency.
Connect AI safety research with HCI, design, philosophy, and public communication, translating complex risks across disciplines and between specialist and non-specialist audiences.

2025-Present · Remote

Independent Adversarial Probing & Research Writing | Rogue Lemming

Conduct exploratory testing of conversational models using jailbreaks, instruction conflicts, multi-turn prompting, refusal-boundary probes, and Gandalf challenge environments.
Document observations on unexpected model behaviour, safety boundaries, manipulation, sycophancy, and human-model dynamics in a public research notebook.
Follow open-source jailbreak research and red-teaming communities to expand practical knowledge of adversarial techniques and reproducible testing.

AI SAFETY ENGAGEMENT

Invited Speaker & Judge | Global South AI Safety Hackathon

2026 · Remote

Apart Research / AI Safety Mexico

Delivered a 30-minute Spanish-language talk on conversational AI risk, human discernment, manipulation, and public participation in AI safety.

Evaluated interdisciplinary and technical AI safety projects addressing adversarial probing, language, and societal impacts.

ADDITIONAL EXPERIENCE

Freelance Multilingual Writer, Editor & Translator | Independent

2018-Present · Remote

Write, edit, and translate in Spanish, English, and Norwegian, communicating complex technology, culture, ethics, and social-risk concepts across audiences.

Synthesize interdisciplinary material into clear narratives for specialist and non-specialist readers, with strong linguistic, cross-cultural, and psychological sensitivity.

2004-2006 · Oslo

Teaching Assistant - Interaction Design & HCI | University of Oslo

Supported undergraduate HCI and Interaction Design courses, facilitated seminars, and evaluated student projects.

Translated theoretical frameworks into practical criteria for analysing usability and human-technology interaction.

EDUCATION & TRAINING

AGI Strategy | BlueDot Impact

2026 · Remote

Training in AI risk modelling, threat scenarios, governance, and intervention strategies.

BSc, Digital Media - Interaction Design /HCI

University of Oslo

BSc, Entrepreneurship & Economics - Social Entrepreneurship

BI Norwegian Business School

CORE CAPABILITIES

- Sociotechnical AI safety
- Human autonomy, overreliance & epistemic risk
- Interdisciplinary research synthesis
- Adversarial & multi-turn probing
- Qualitative AI behaviour evaluation
- HCI & Research through Design
- Cross-disciplinary communication
- Multilingual LLM evaluation: NO / EN / ES

PUBLIC RESEARCH & COMMUNICATION

Cognitive Topology Project - multidimensional and dynamic representations of AI cognition and behaviour, designed to expose interaction-related blind spots and support better-calibrated reliance.

Rogue Lemming - public field notebook on LLM behaviour, adversarial prompting, conversational risk, and human-model dynamics.

Sattva Labs - essays, conceptual frameworks, and public-facing resources connecting AI safety, HCI, cognition, design, and cross-cultural approaches to intelligence.
